

Project Completion Report

easyMed Telemedicine Platform

Student Name: Shravan Singh Chauhan

GitHub: [easyMed-Platform](#)

Deployment: easymed-platform.onrender.com

Generated on May 03, 2026

1. Project Overview

easyMed is a comprehensive multi-specialty telemedicine platform designed to bridge the gap between rural patients and specialized medical care. The platform facilitates real-time consultations, AI-driven symptom analysis, and secure medical record management.

2. Key Features

Feature	Description
Symptom Diagnostic Tool	Clinical decision support for Urinary, Respiratory, and Diarrheal symptoms.
AI Assistant	Real-time AI chatbot for health inquiries and medical guidance.
Case Management	End-to-end tracking of patient cases from rural doctors to specialists.
DICOM/Imaging Viewer	In-browser medical imaging viewer for diagnostic accuracy.
Real-time Chat	Secure communication channel between patients and doctors.

3. URD Symptom Implementation

A major recent update included the 'URD Symptom' tool, which provides a wizard-style diagnostic workflow. It uses strict clinical branching logic to assess Urinary symptoms, detect Red Flags, and determine if a case is Uncomplicated UTI, Complicated UTI, or a Medical Emergency.

4. Technology Stack

Layer	Technology
Backend	Python, Flask, Flask-SocketIO
Database	PostgreSQL (Production), SQLite (Local)
Frontend	HTML5, CSS3, JavaScript, Bootstrap 5
Mobile	Native Android (WebView Integration)
Deployment	Render, Google Play Console

Conclusion

The easyMed platform is now fully functional and ready for clinical use. All major requirements have been met, and the system is deployed and stable.
